Подните плочки, изработени од гранулат од гума, се модерно и во последно време многу популарно решение за внатрешно и надворешно уредување.

Поради нивните бројни квалитети наоѓаат широка употреба при поплочување на тераси, балкони, детски градинки и школски дворови, спортски игралишта, фитнес центри како и за простори околу базени.

Гумените плочки се пријатни на допир и доста помекти во споредба со други видови на подни облоги. Произведени се од неколку видови специјални гранулати од гума или нивна мешавина поврзани со полиуре-тан што ги прави многу отпорни и издржливи на температурни промени, различни хемис-ки агенси, како и на запаливост со цигара.

Ги нудиме во повеќе нијанси на бои кои исто така се отпорни и непроменливи под влијание на светлина и други надворешни услови.

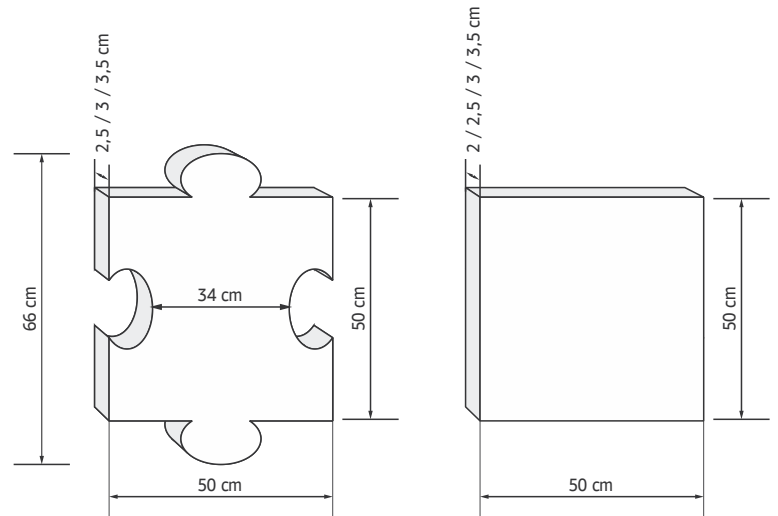

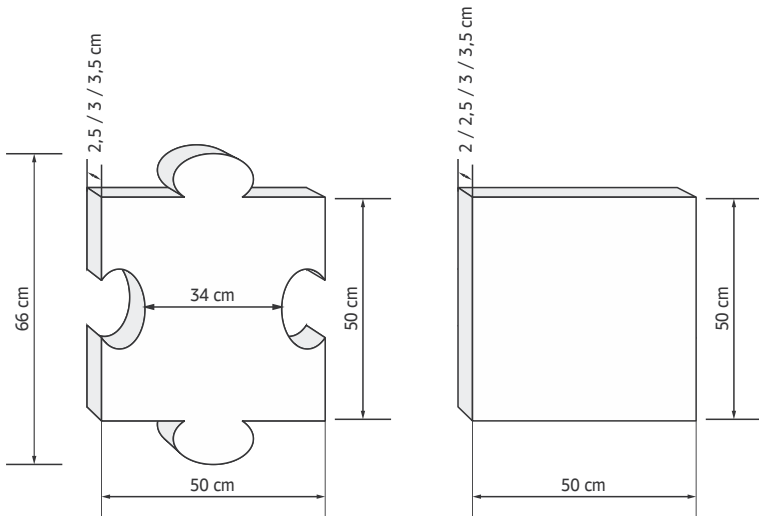

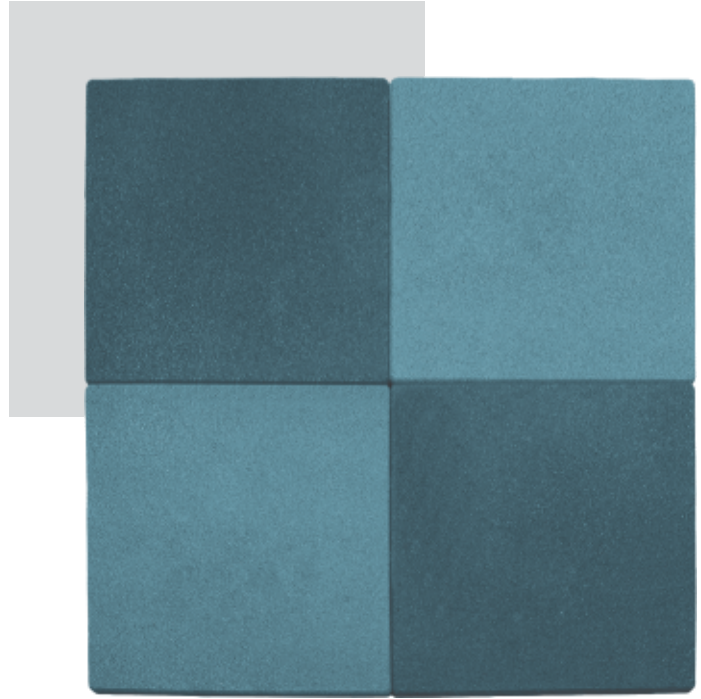

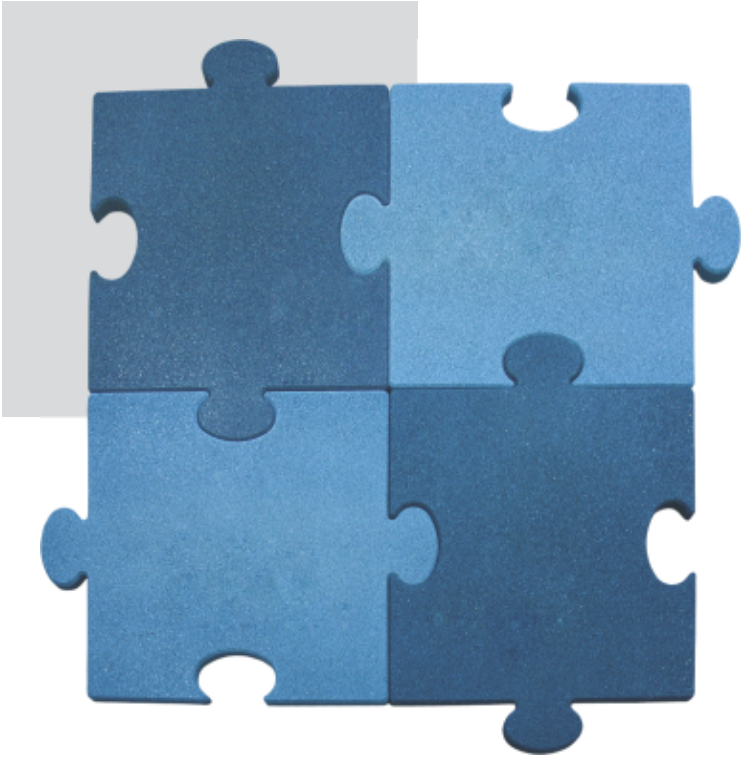

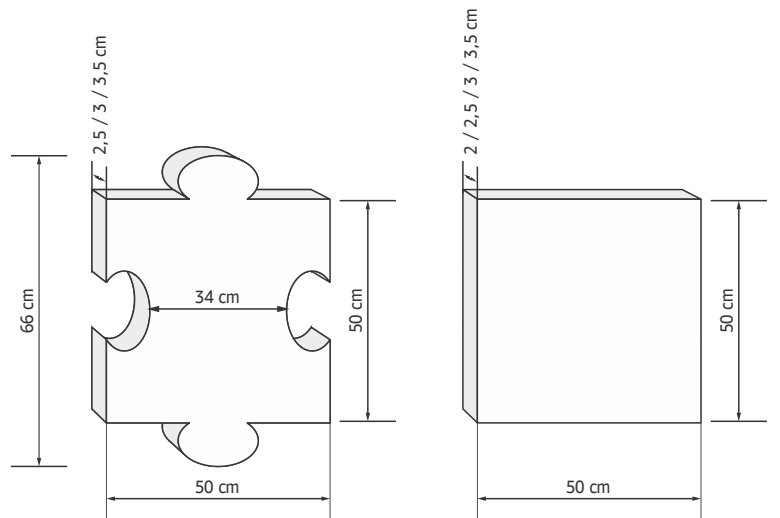

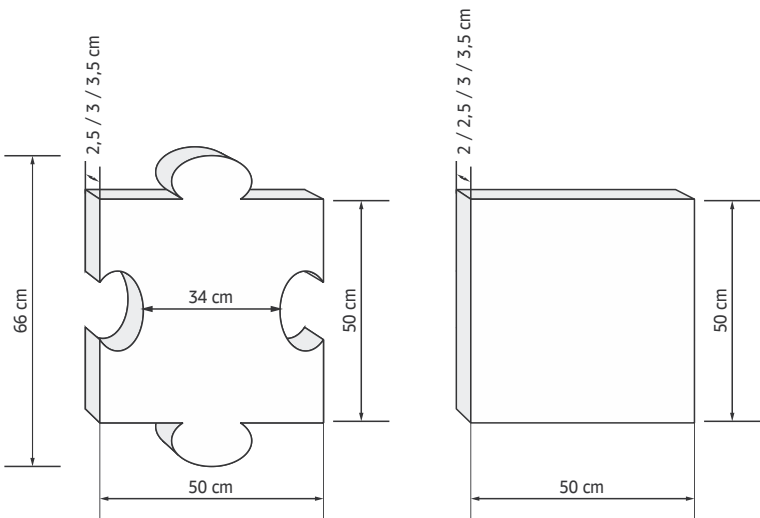

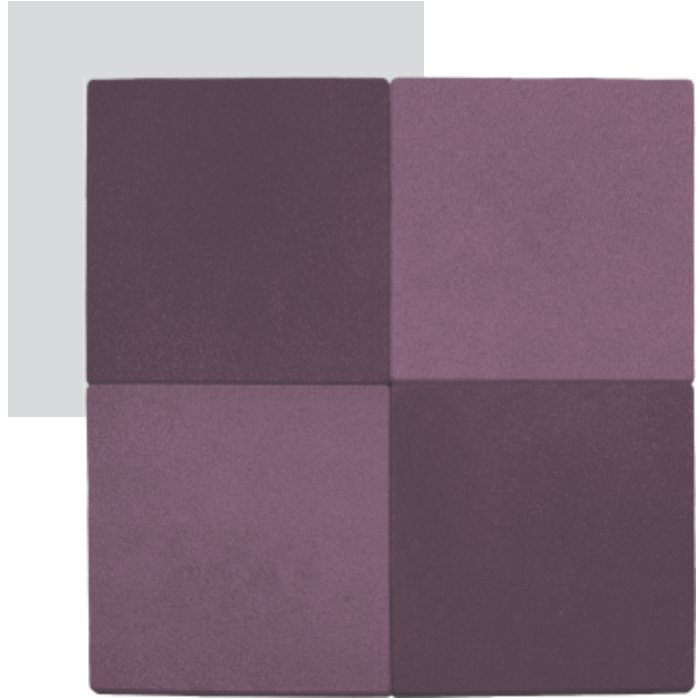

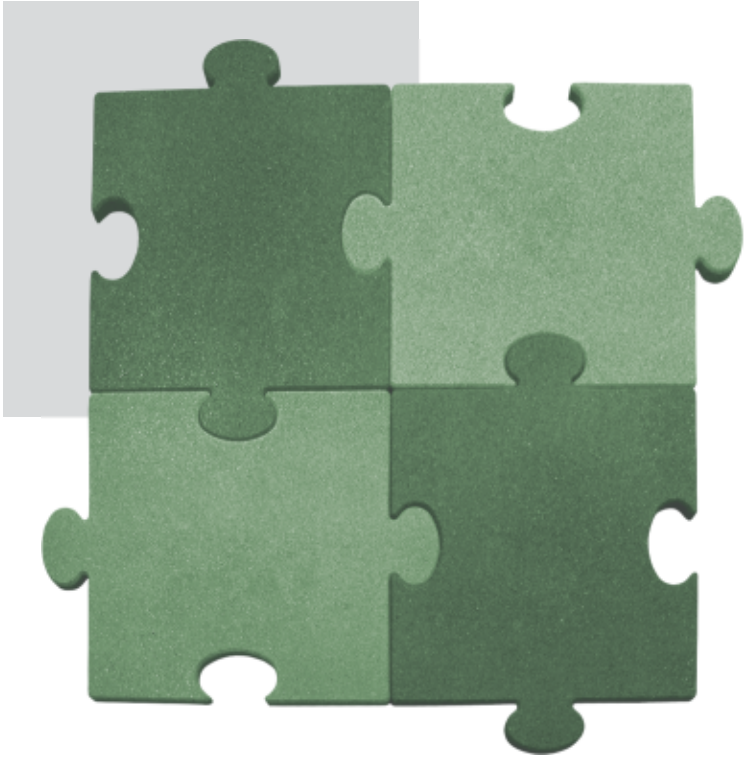

Floor tiles made of rubber granulate are modern and lately very popular solution for interior and exterior decoration.

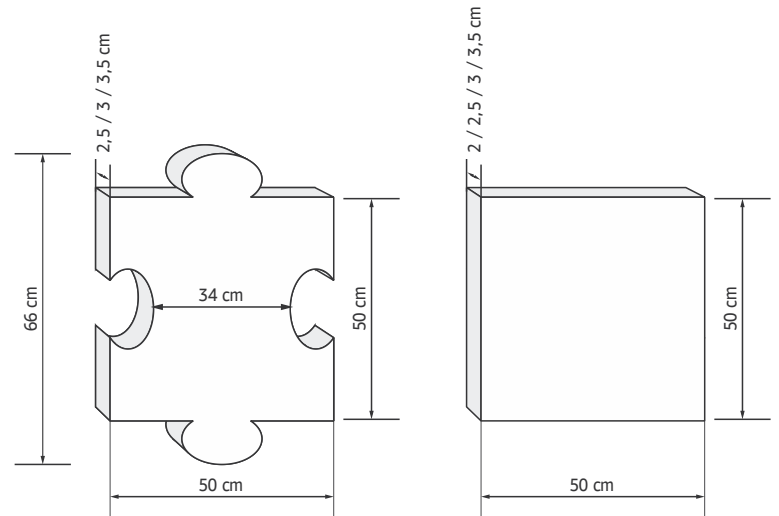

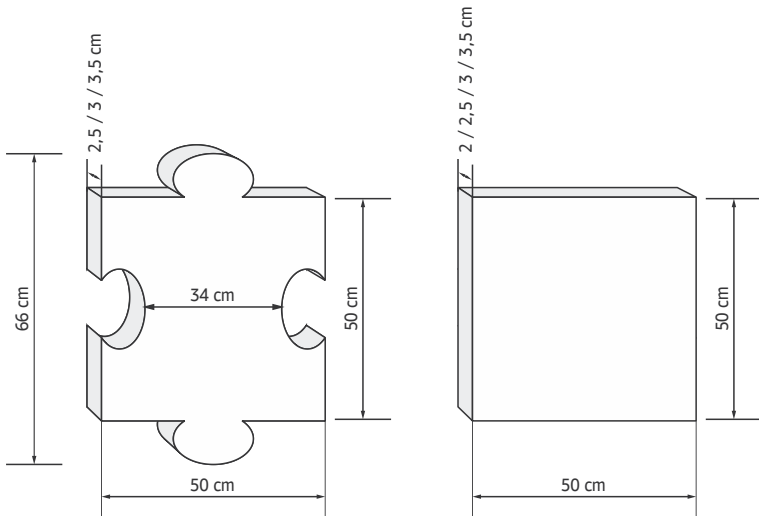

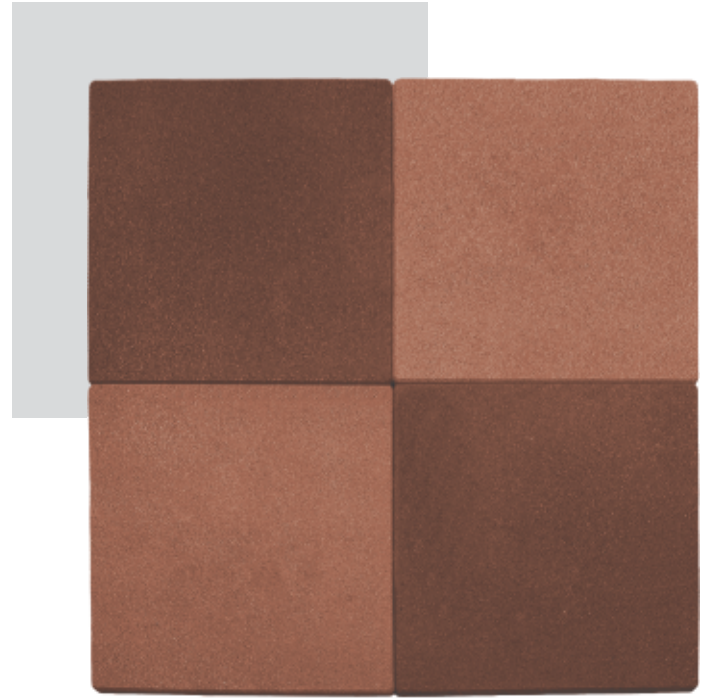

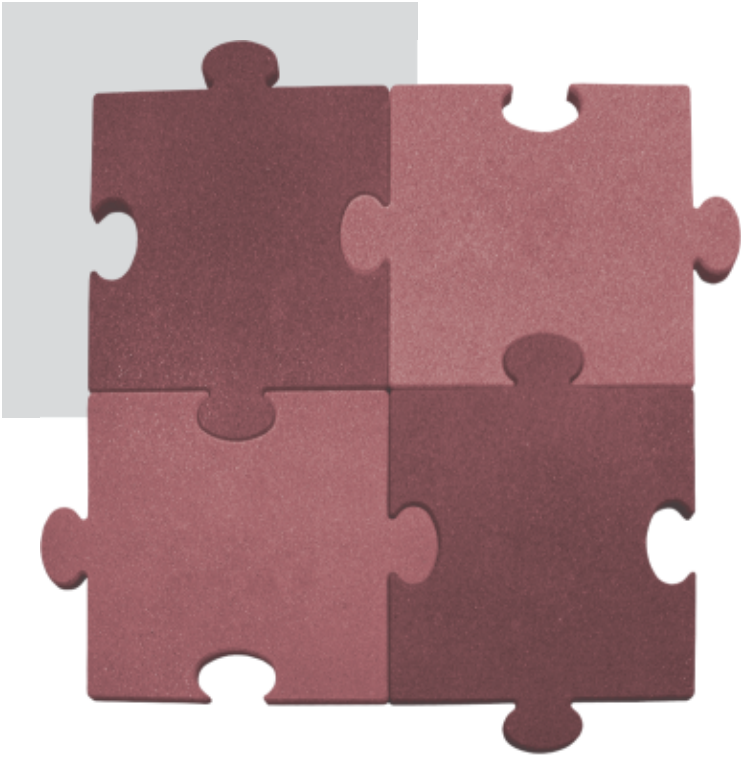

Due to their numerous qualities are widely used on various types of floors and areas, such as terraces, balconies, kindergartens and school yards, playgrounds, fitness centers as well as areas around swimming pools.

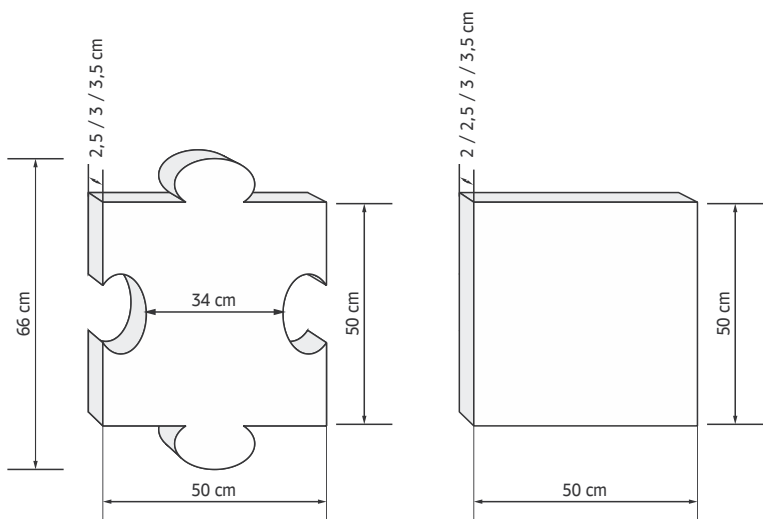

Rubber floor tiles are pleasant in touch and softer than other flooring types. They are manufactured from rubber granulate of various kinds bonded with polyurethane which makes them very durable and resistant to temperature changes, chemical agents, and flammability of cigarette butt.

We offer more shades of colors that are also resistant and immutable influenced by light and other external conditions.
